

Assignment 4

Request for Proposal: Wireless Infrastructure Deployment

Estimated completion time: 2 to 3 hours

Overview

Create a professional Request for Proposal (RFP) for the deployment of wireless infrastructure in a fictional organization. Your final RFP must be written in Markdown and published in a GitHub repository.

Scenario

Your organization needs a new wireless network that provides reliable coverage, strong security, modern performance, centralized management, and support for future growth.

You may create the organization's name, size, number of users, office layout, and current technical environment.

Required RFP Sections

1. Organization and Project Background

- What the organization does and who it serves
- The size of the organization and number of users
- Why the new wireless network is required
- Current problems or limitations

2. Project Objectives

- Reliable wireless coverage
- Improved performance and capacity
- Stronger security
- Centralized monitoring and management
- Support for future growth

3. Scope of Work

- Wireless site survey
- Access point placement
- Installation and configuration
- Integration with the existing wired network
- Security configuration
- Testing and validation
- Documentation
- Basic maintenance and support expectations

4. Technical Requirements

- Wi-Fi 6 or newer
- WPA3

- Guest network isolation
- VLAN integration
- Monitoring and reporting
- Support for the expected number of users and devices
- Scalability
- Mandatory and preferred requirements

5. 5. Deliverables

- Site survey report
- Wireless network design
- Installed and configured access points
- Network diagram
- Test results
- Administrator guide
- Support plan

6. 6. Timeline and Pricing

- Proposal deadline
- Vendor selection date
- Project start date
- Installation and testing period
- Project completion date
- Initial costs and ongoing costs

7. 7. Evaluation Criteria

- Create a weighted evaluation table that totals 100 percent

8. 8. Submission and Terms

- Submission format and contact information
- Late-submission policy
- Confidentiality
- Support expectations
- Change-control process
- Contract duration

Example evaluation table:

CATEGORY	WEIGHT
TECHNICAL SOLUTION	35%
SECURITY	25%
IMPLEMENTATION PLAN	15%

VENDOR EXPERIENCE	10%
PRICING	15%
TOTAL	100%

GitHub Requirements

- Use a clear and professional repository name.
- Place the complete RFP in the README.md file.
- Use appropriate Markdown headings, lists, and tables.
- Include at least one relevant diagram or image.
- Do not include passwords, credentials, private addresses, or confidential information.

Length and Focus

Recommended length: approximately 1,000 to 1,500 words. Focus on clarity, realistic technical requirements, professional structure, and correct Markdown formatting. You are not expected to create a full enterprise-level procurement document.

Submission

Submit the public link to your GitHub repository in the Assignment 4 submission area in MyLearning. Your repository must be accessible to the instructor at the time of grading.

A sample RFP and the grading rubric are attached for reference. Use the sample to understand the expected structure, but do not copy its content.

Final Checklist

- ☐ The RFP includes all eight required sections.
- ☐ Mandatory and preferred requirements are identified.
- ☐ The evaluation table totals 100 percent.
- ☐ The README.md is clearly formatted.
- ☐ The repository includes one relevant visual.
- ☐ The GitHub link works and is publicly accessible.
- ☐ The document has been proofread.
